

Your baby is growing up...

When your child is around 6 months of age their dietitian will help start the weaning process of introducing solid foods into their diet. At this time you will also be introducing a second stage protein substitute.

PKU squeezeie® has been specifically developed to make this process as simple as possible.

A flavoured, ready-to-feed protein substitute in a semi-solid consistency.

- ✓ Available in pre-measured, 10g protein equivalent pouches – no weighing or measuring required and easy to use away from home
- ✓ It is low in volume to encourage a healthy appetite for food
- ✓ It is a similar texture to other foods introduced at this time
- ✓ It is the same consistency every time, so your child knows what to expect
- ✓ Taken off the spoon – keeping you in control

PKU squeezeie is made from natural apple and banana flavours. These are flavours your baby will be used to as apple and banana are fruits often introduced during weaning.

Natural
flavours

No sweeteners

It also contains docosahexaenoic acid (DHA) which contributes to the maintenance of normal vision and normal brain function*¹

How to take PKU squeezeie:

1. Shake well before use.

2. Consume from spoon or directly from pouch.

Water or permitted drinks should be taken after PKU squeezeie.

* The beneficial effect is obtained with a daily intake of 250mg DHA (also known as Omega 3).
